

Alameda Alliance for Health Mobile Mammography

Breast cancer screening is coming your way

At Alameda Alliance for Health (Alliance), we are here to help our members take charge of their health. We are looking to partner with provider locations to host mobile mammography services to increase breast cancer screening rates for Alliance providers. Mobile mammography helps provide a convenient and effective preventative health screening. This service can also help providers increase HEDIS® scores, close gaps in care, and help increase your pay-for-performance scores.

How it works

- The Alliance covers the total cost of the mobile mammography event. (Options for a full-service mobile coach or portable unit.)
- The Alliance Quality Improvement (QI) Department will work with the provider to arrange a date and time the mobile mammography services.
- Provider schedules women 50-74 years of age for a breast cancer screening.
- A minimum of 30 screenings are required, and up to 45 screenings can be in one (1) day.
- Results are shared with referring provider within five (5) business days.

Please email the Alliance QI Department to partner with us and offer these services!
