

# LIVE HEALTHY

## Starting an Exercise Program

Regular exercise is a part of a healthy lifestyle. Talk to your doctor about what type and how much exercise to do if you:

- Have not been active
- Have any health problems
- Are pregnant
- Are over age 60

The goal is to exercise most days each week. Exercise for 30-60 minutes each time. To prevent injury, slowly increase the number of days and the amount of time you spend exercising.

### Regular exercise helps to:

- Improve how well your heart and lungs work
- Maintain a healthy weight or help you lose weight
- Improve balance, muscle tone, and joint flexibility
- Relieve stress and tension and improve your mood
- Reduce the risk of heart disease, high blood pressure, osteoporosis, and diabetes

## Getting started:

- Choose an exercise you like to do
- Try to vary the type of exercise you do, to increase the health benefits and prevent boredom and injury

## Types of exercise:

- **Aerobic exercises** move large muscles and improve the health of your heart and lungs. Examples include walking, jogging, aerobic classes, bicycling, swimming, tennis, and dancing.

Walking is a good choice for beginners. You only need a good pair of athletic shoes. Walking can burn as many calories as jogging without the high impact on your joints. Walking is good for your heart and lungs. It also helps prevent osteoporosis, a common type of bone disease.

- **Strength-training exercises** strengthen muscles and build strong bones. Using weights, exercise bands, other weight lifting equipment, and doing push-ups and sit-ups are examples of strength training. Talk to your doctor before beginning strength training if you have high blood pressure or other health problems.

- **Flexibility exercises**, also called stretching, increase the length of muscles to improve balance and joint health. Stretching is important before and after exercising and as an exercise itself. Examples include yoga and tai chi.

- **Begin and end an exercise session with 5 minutes of gentle exercise or stretching.** For example, walk 5 minutes before and after jogging. This will help prevent injury.
- **Exercise at a comfortable pace.**  
Listen to your body. You are exercising too hard if you:
  - Have pain in your joints, feet, ankles, or legs
  - Have problems breathing
  - Feel weak, faint, or dizzy during or after exercising

**Stop exercising and call your doctor, or 911, if you have:**

- Pain or pressure in your chest, left neck, shoulder, or arm
- Sudden dizziness
- Pale, sickly skin color
- Fainting

**Talk to your doctor or nurse if you have any questions or concerns.**

**You don't have to do this alone!** For classes and tools to help you live healthy, call Alliance Health Programs at **510-747-4577**.
